Available Zips

Feature Add

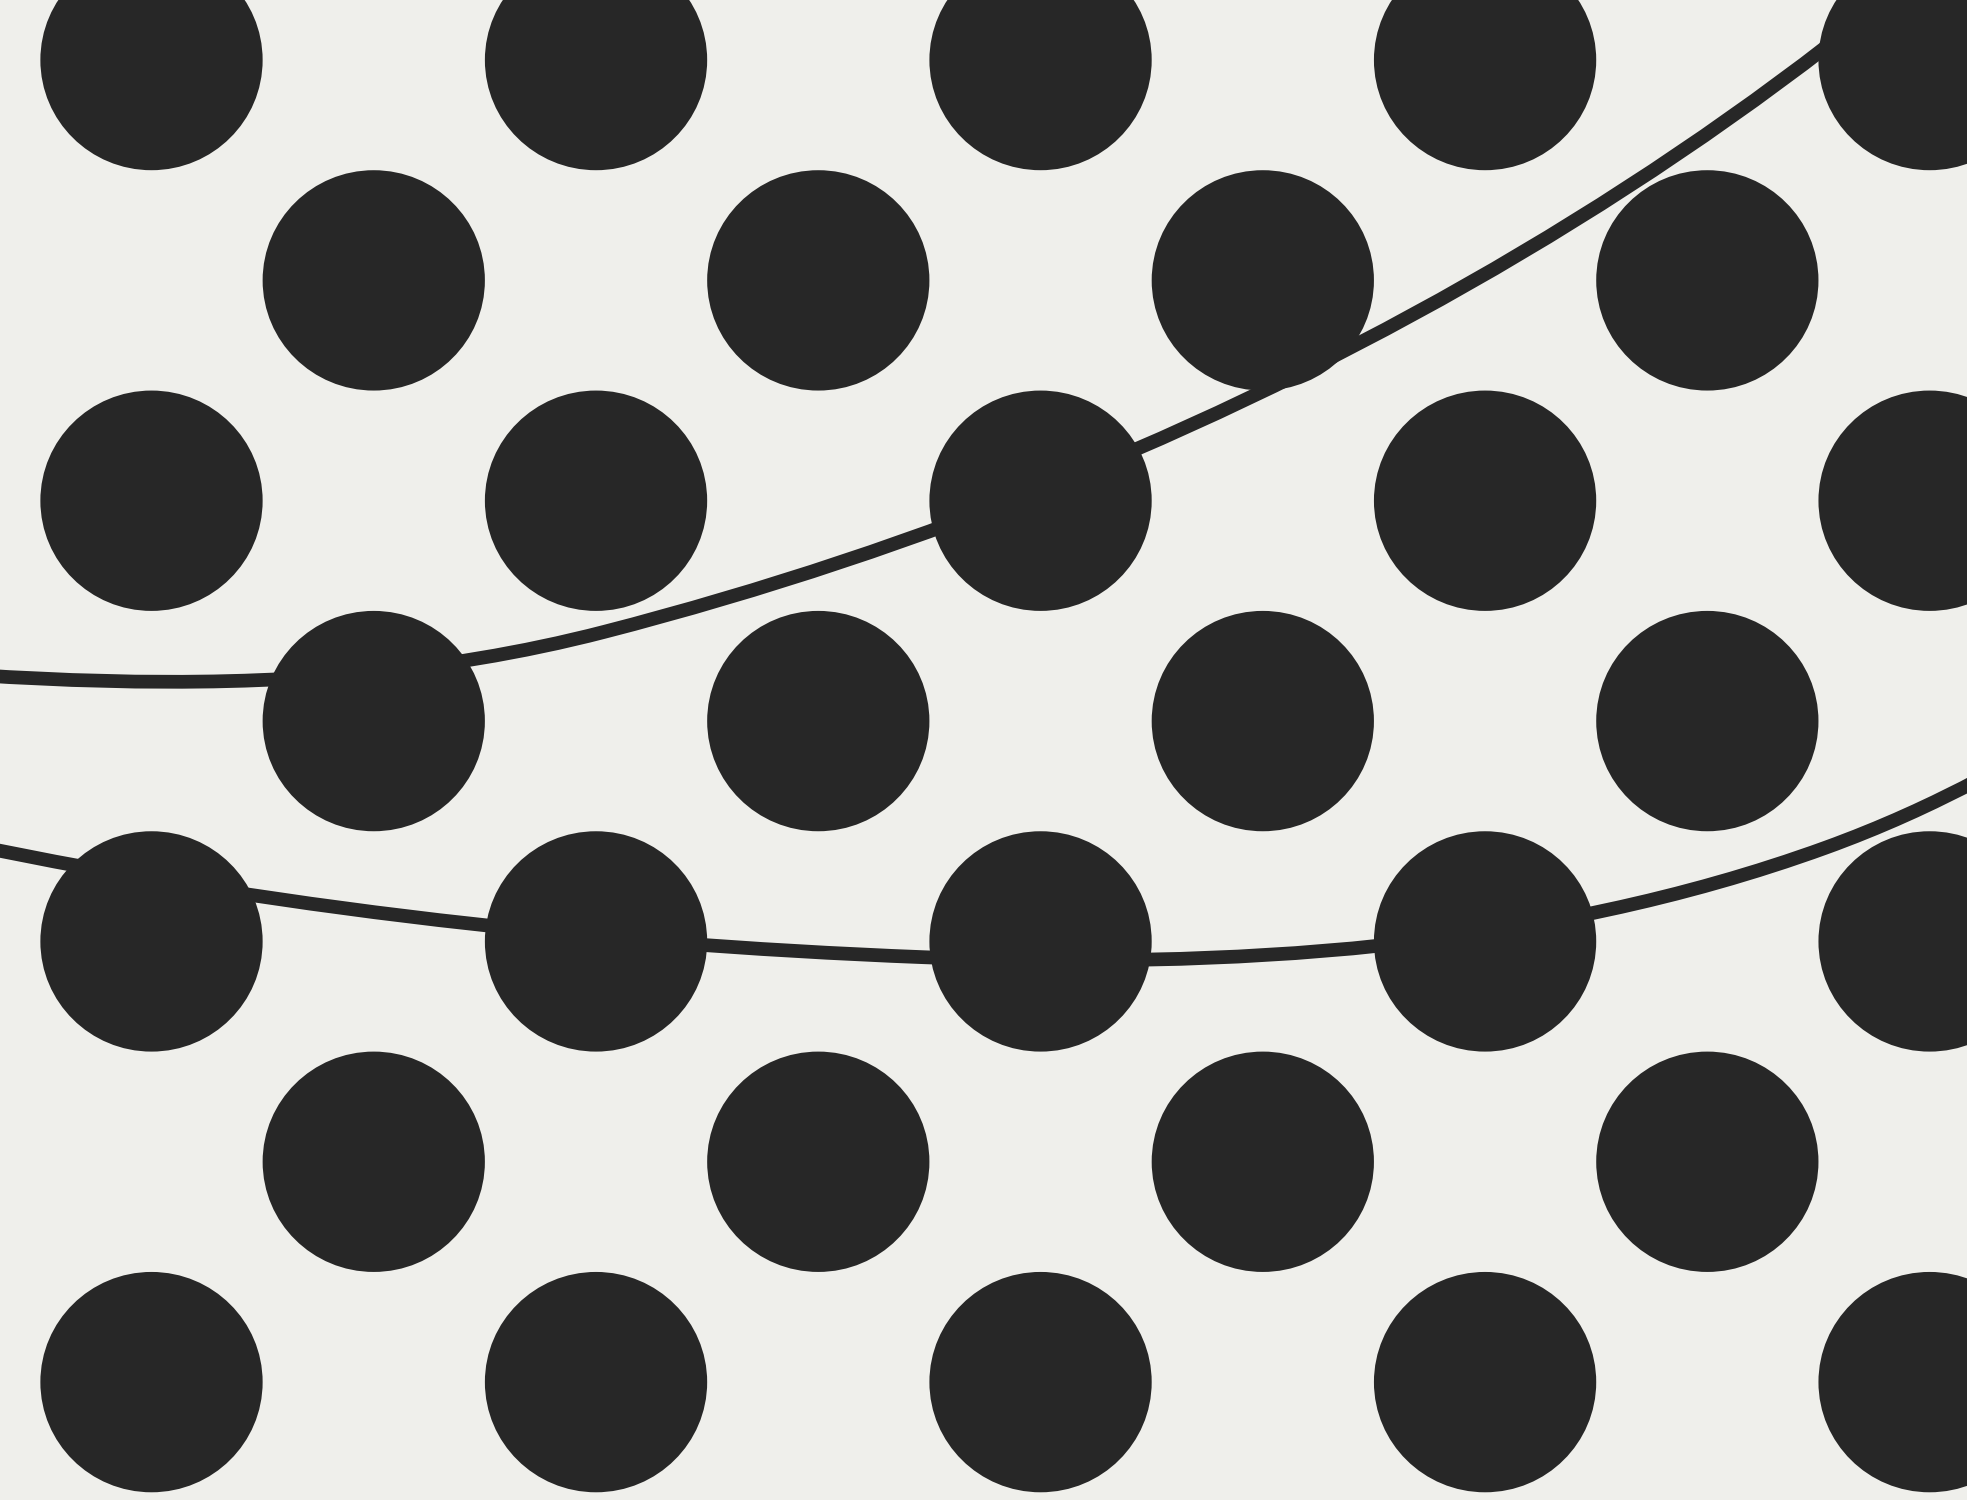

Details

Problem

Walmart Redirect links were failing during creation due to the product not being available in the area during creation.

Solution

Append the initial link with a zip code that we can use for a stock check. The zip should be one where we are confident that the product is available.

3 responses

Survey

For some of my Walmart link creation, this was a **crucial step** to get the link to generate and not have to go to engineering to have them create new on the back end

Always thankful for solutions that remove the need to run to engineering for help.

This feature allows adops to **avoid encountering errors** and having to bring in engineering in order to create links.

Survey

"If the feature could reference and crawl an attached targeting list for an applicable zip code that would be cool, but I think that it is perfectly fine as is."

Quarter 2

Web Line Item

Feature Add

Details

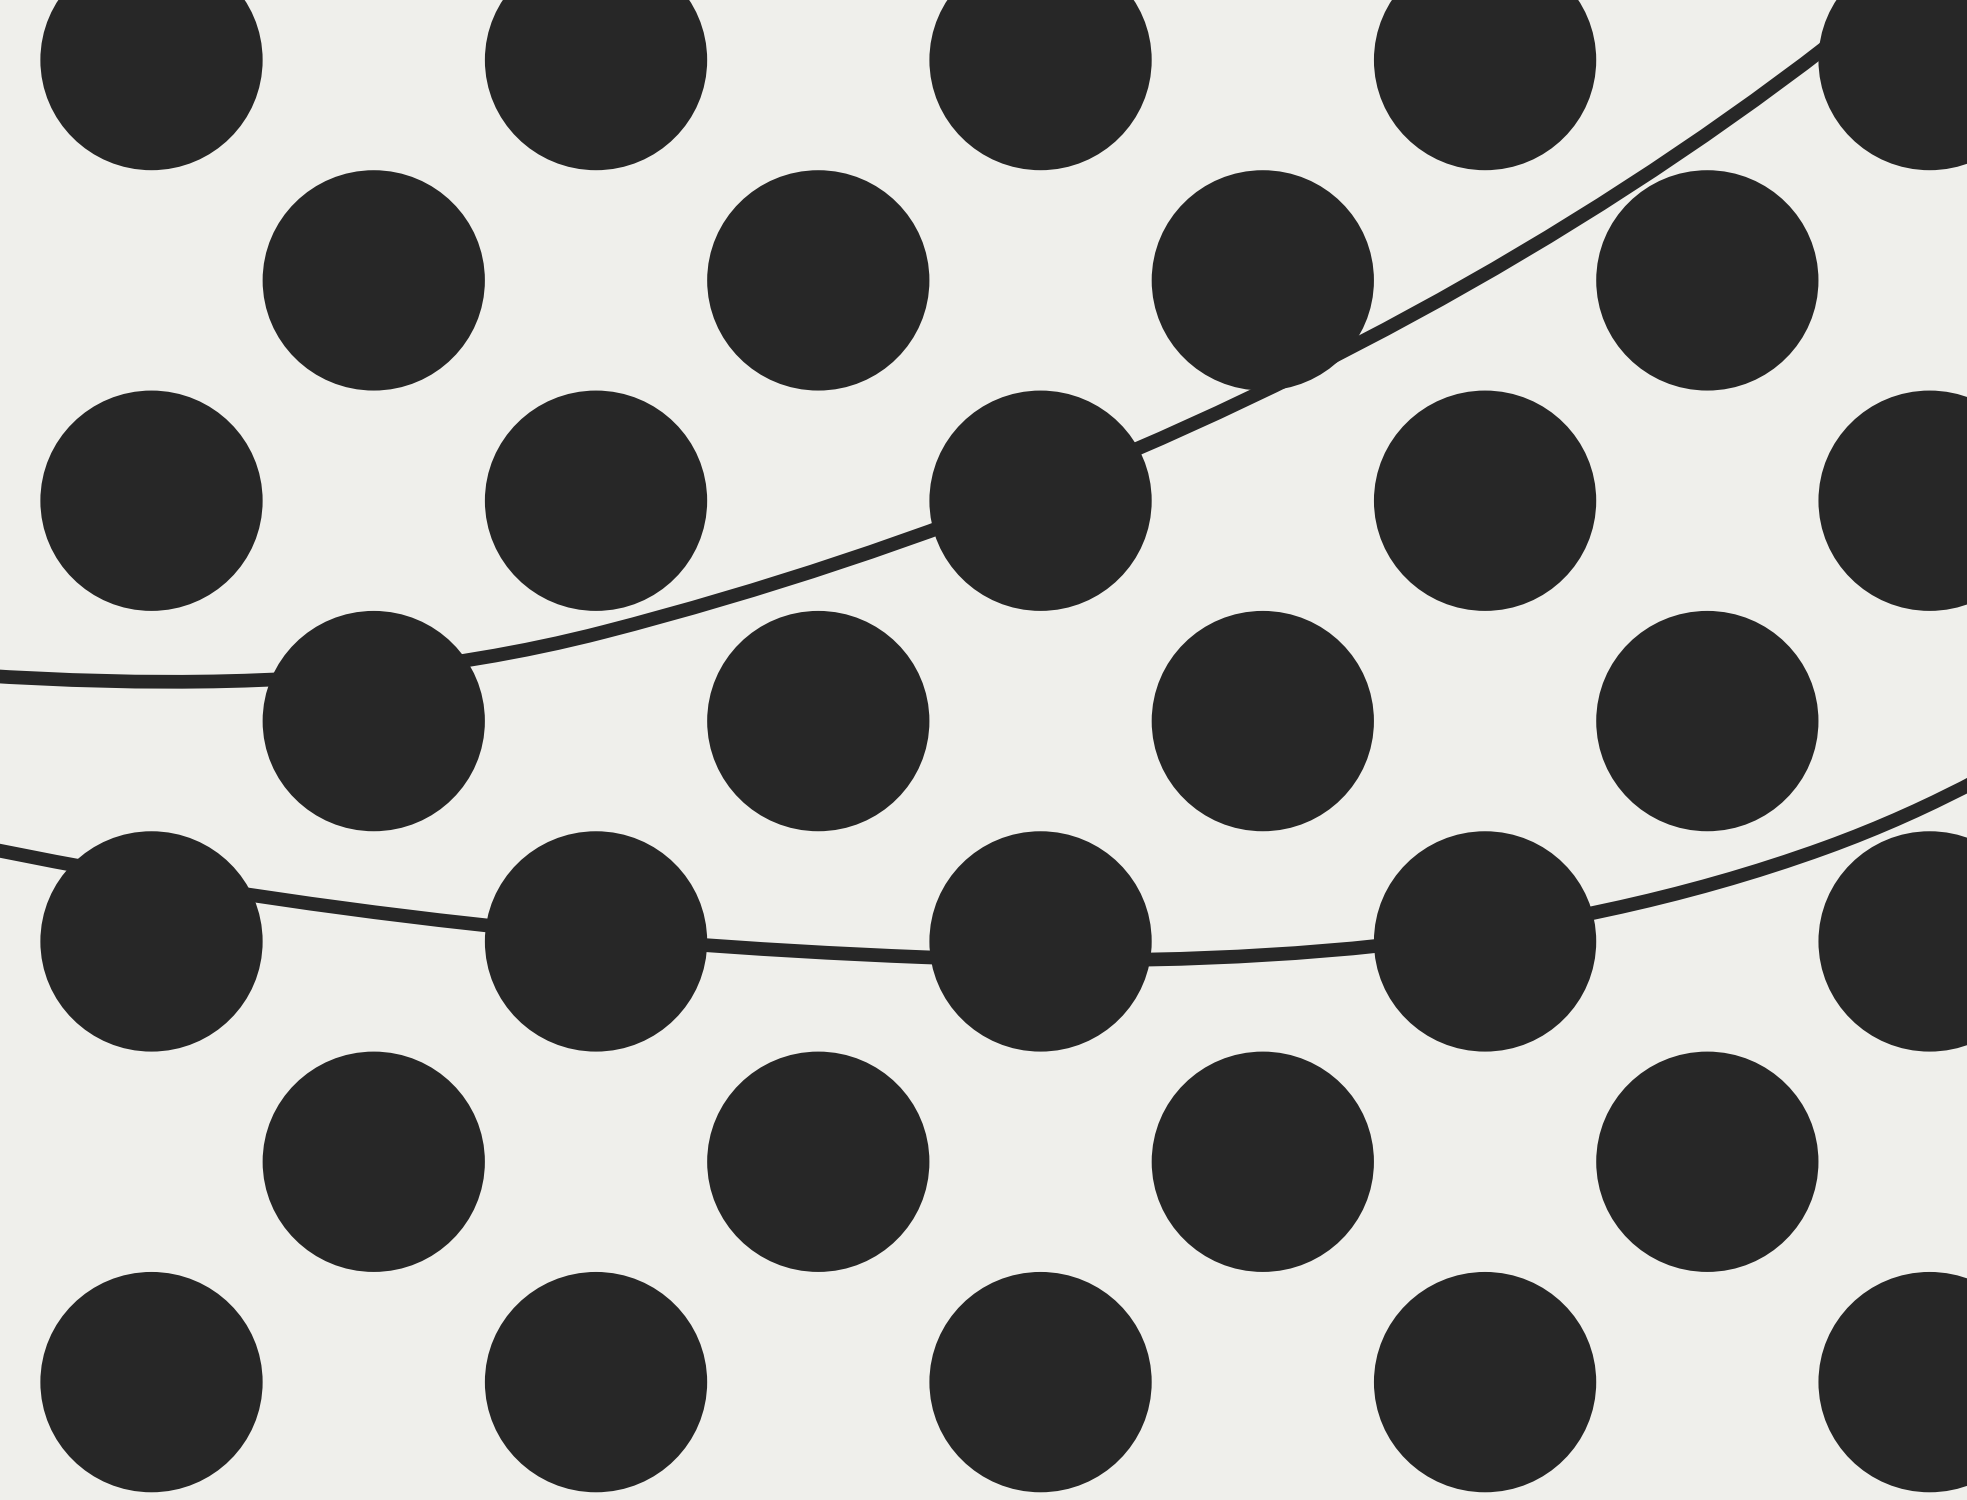

Problem

We started serving more in web, but in order to run a web line item, we had to create it as an ATC line item, then make changes in BW.

This restricted users from making changes in MSP, among other inconveniences.

Solution

Create a “Web” line item type with all of the necessary settings to push over to Beeswax accurately, and allow for edits in MSP throughout campaign duration.

Phase 1

1 Split “Line Item Type” into Environment and Audience

LINE ITEM INFO

Line Item Name

Run of Network

Frame 4

Add 'External Web' in Phase 2

Frame 4

Add 'Run of Network' in Phase 2

Phase 2 - ATC and Aware Web

1 Add an External Web option for Environment

2 Add a Run of Network option for Audience

2 Add a Device/OS field

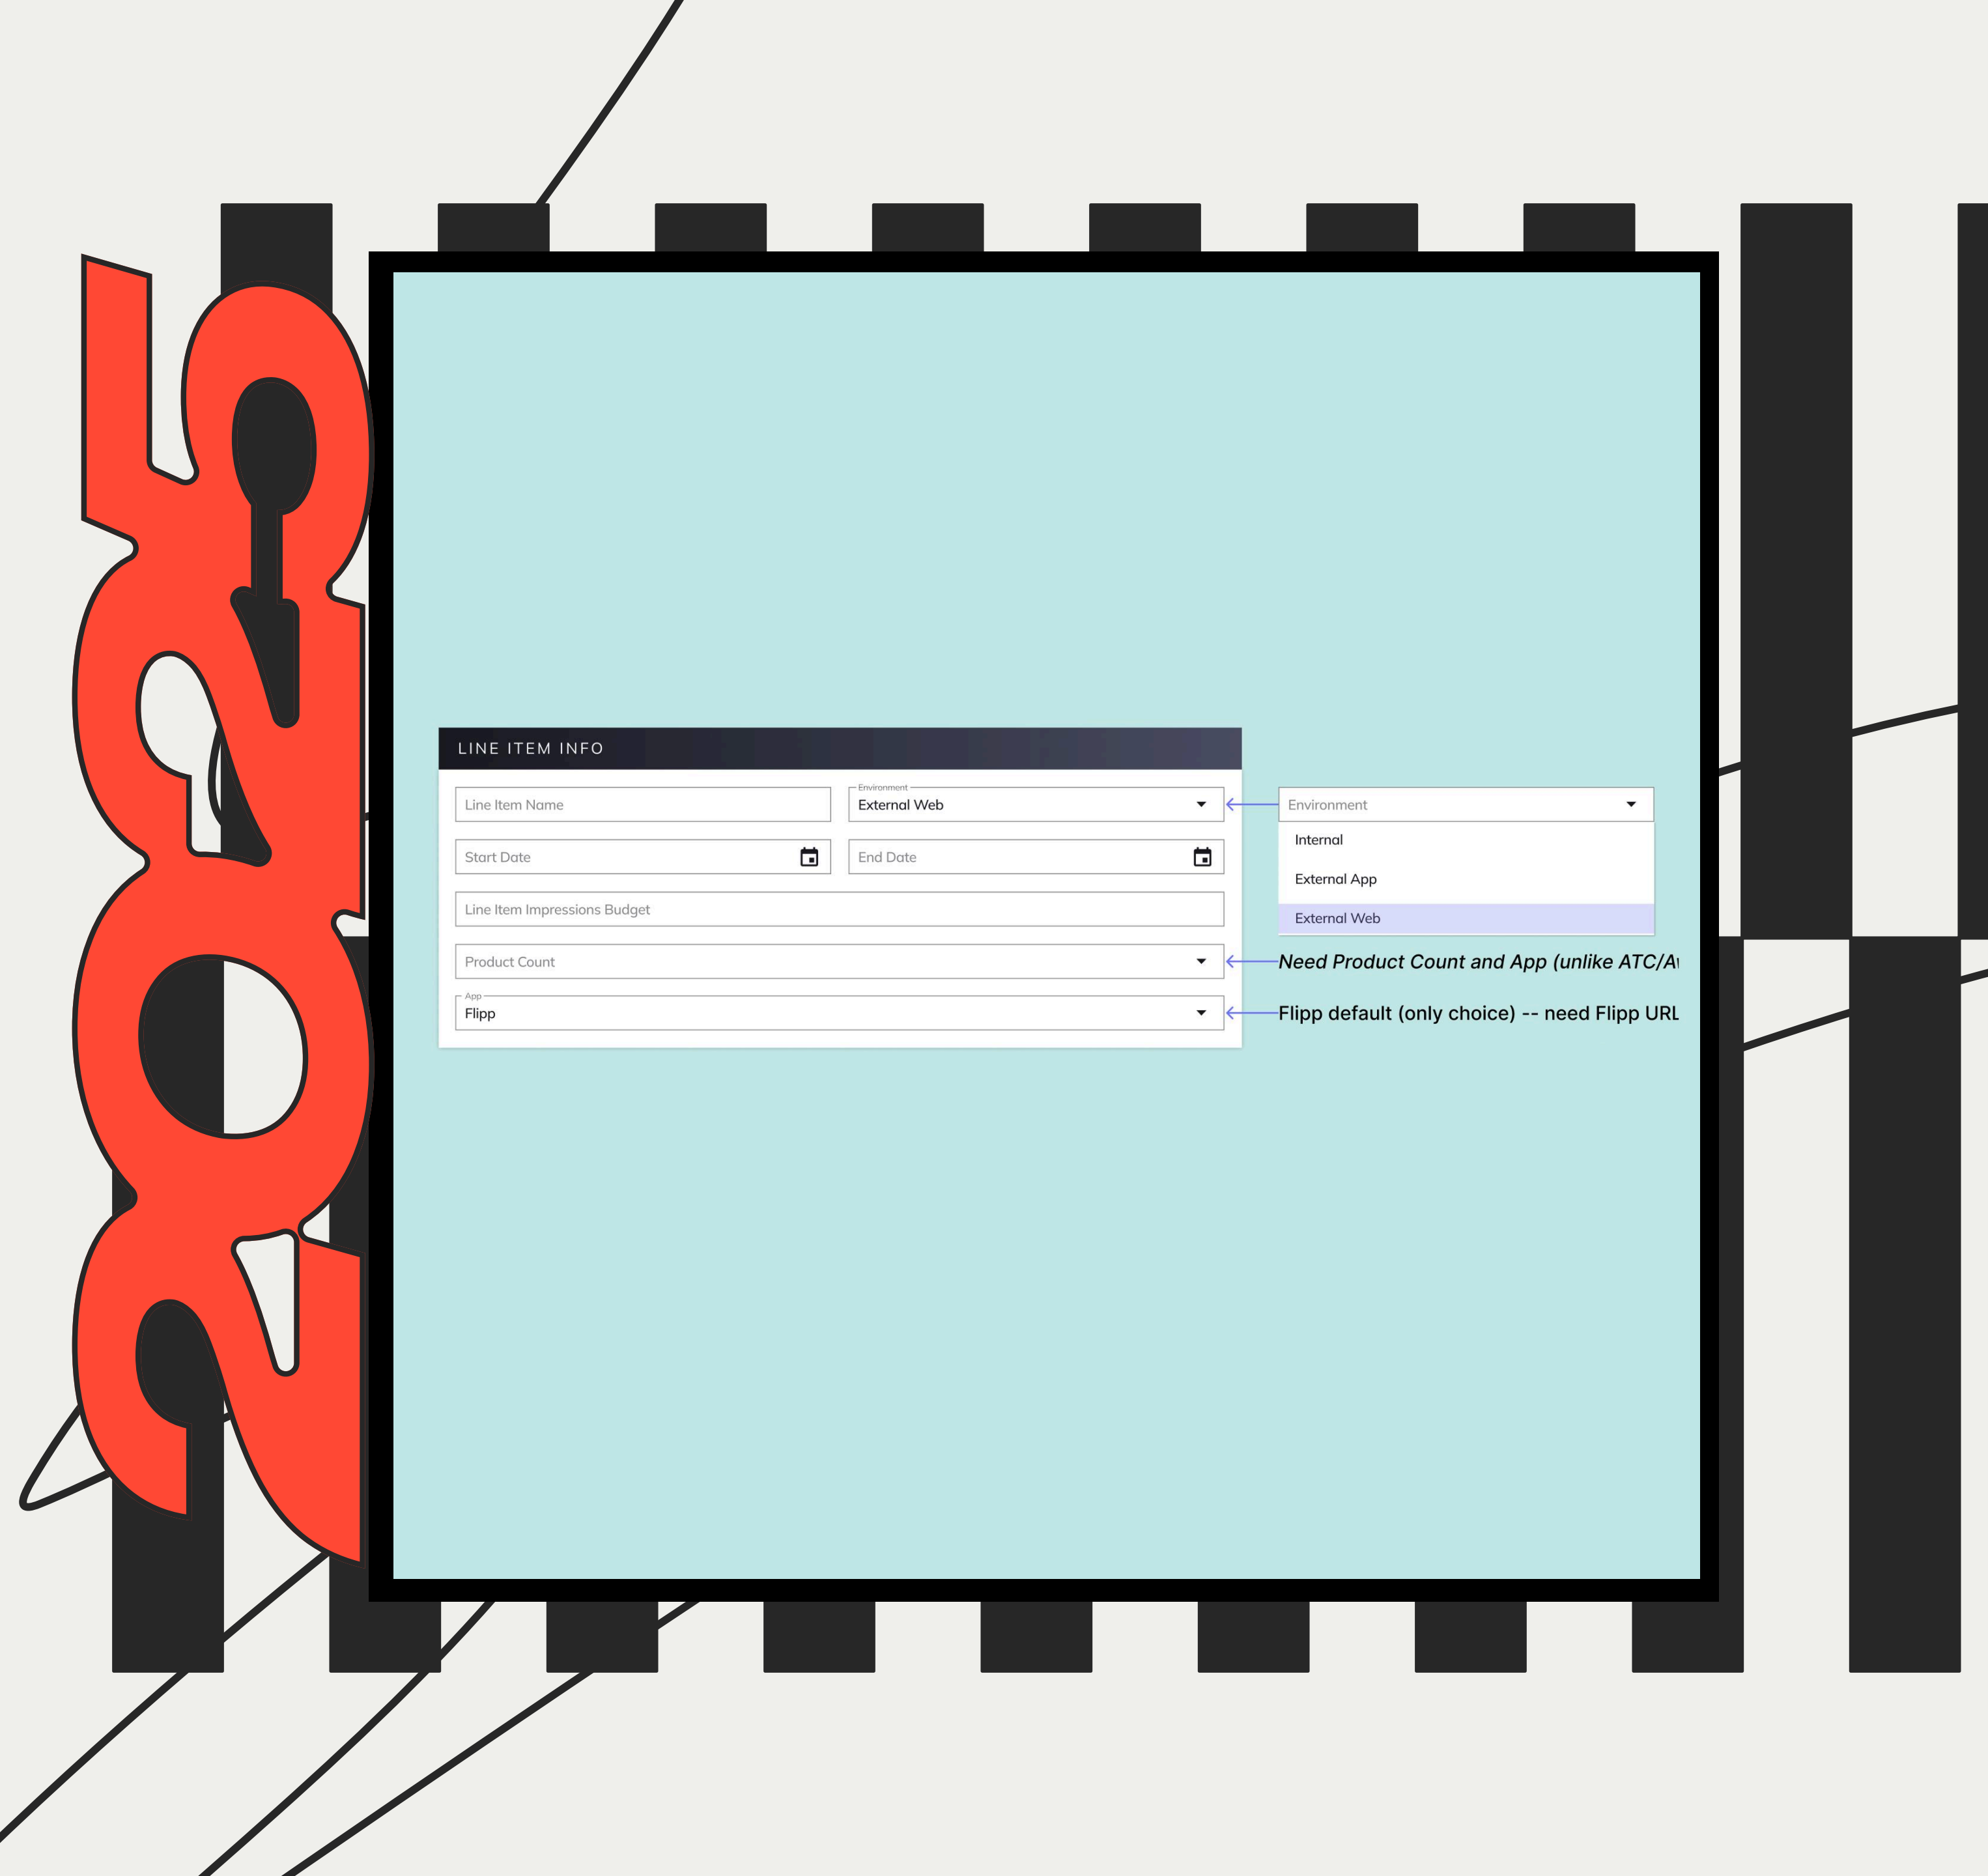

Phase 3 - ATL Web (Flipp)

1 Add Phase 2 features for line items in an ATL flight

2 Include Product Count and App fields (default App to Flipp)

3 Automatically generate and insert Flipp URLs using the Product Name (List Message) inputs

Details

PREVIOUS			NEW			
A T L	Type	Internal	Environment	Internal

Survey

This feature made making web line items a breeze. anything that allows us to not have to go in after line item creation to make edits in beeswax, i'm a huge fan

Not having to make all of the edits for a web line item in beeswax was a major upgrade. This change removed the possibility of re-pushing a web line item to an in app environment.

Not only has this improved workflow and reduced the amount of time spent making adjustments in Beeswax, this has significantly helped to increase campaign margins (I believe margin has gone up around ~3% overall since this feature was released). It also restricts where impressions are served in only our hand-vetted CPG relevant inventory.

Survey

Since using this feature, how has your ability to complete tasks changed? Check all that apply.

3 responses

"It's an extra step so it does take a little bit of extra time, but I believe the feature functions great and it will be beneficial for the data team when pulling data in the future."

Survey

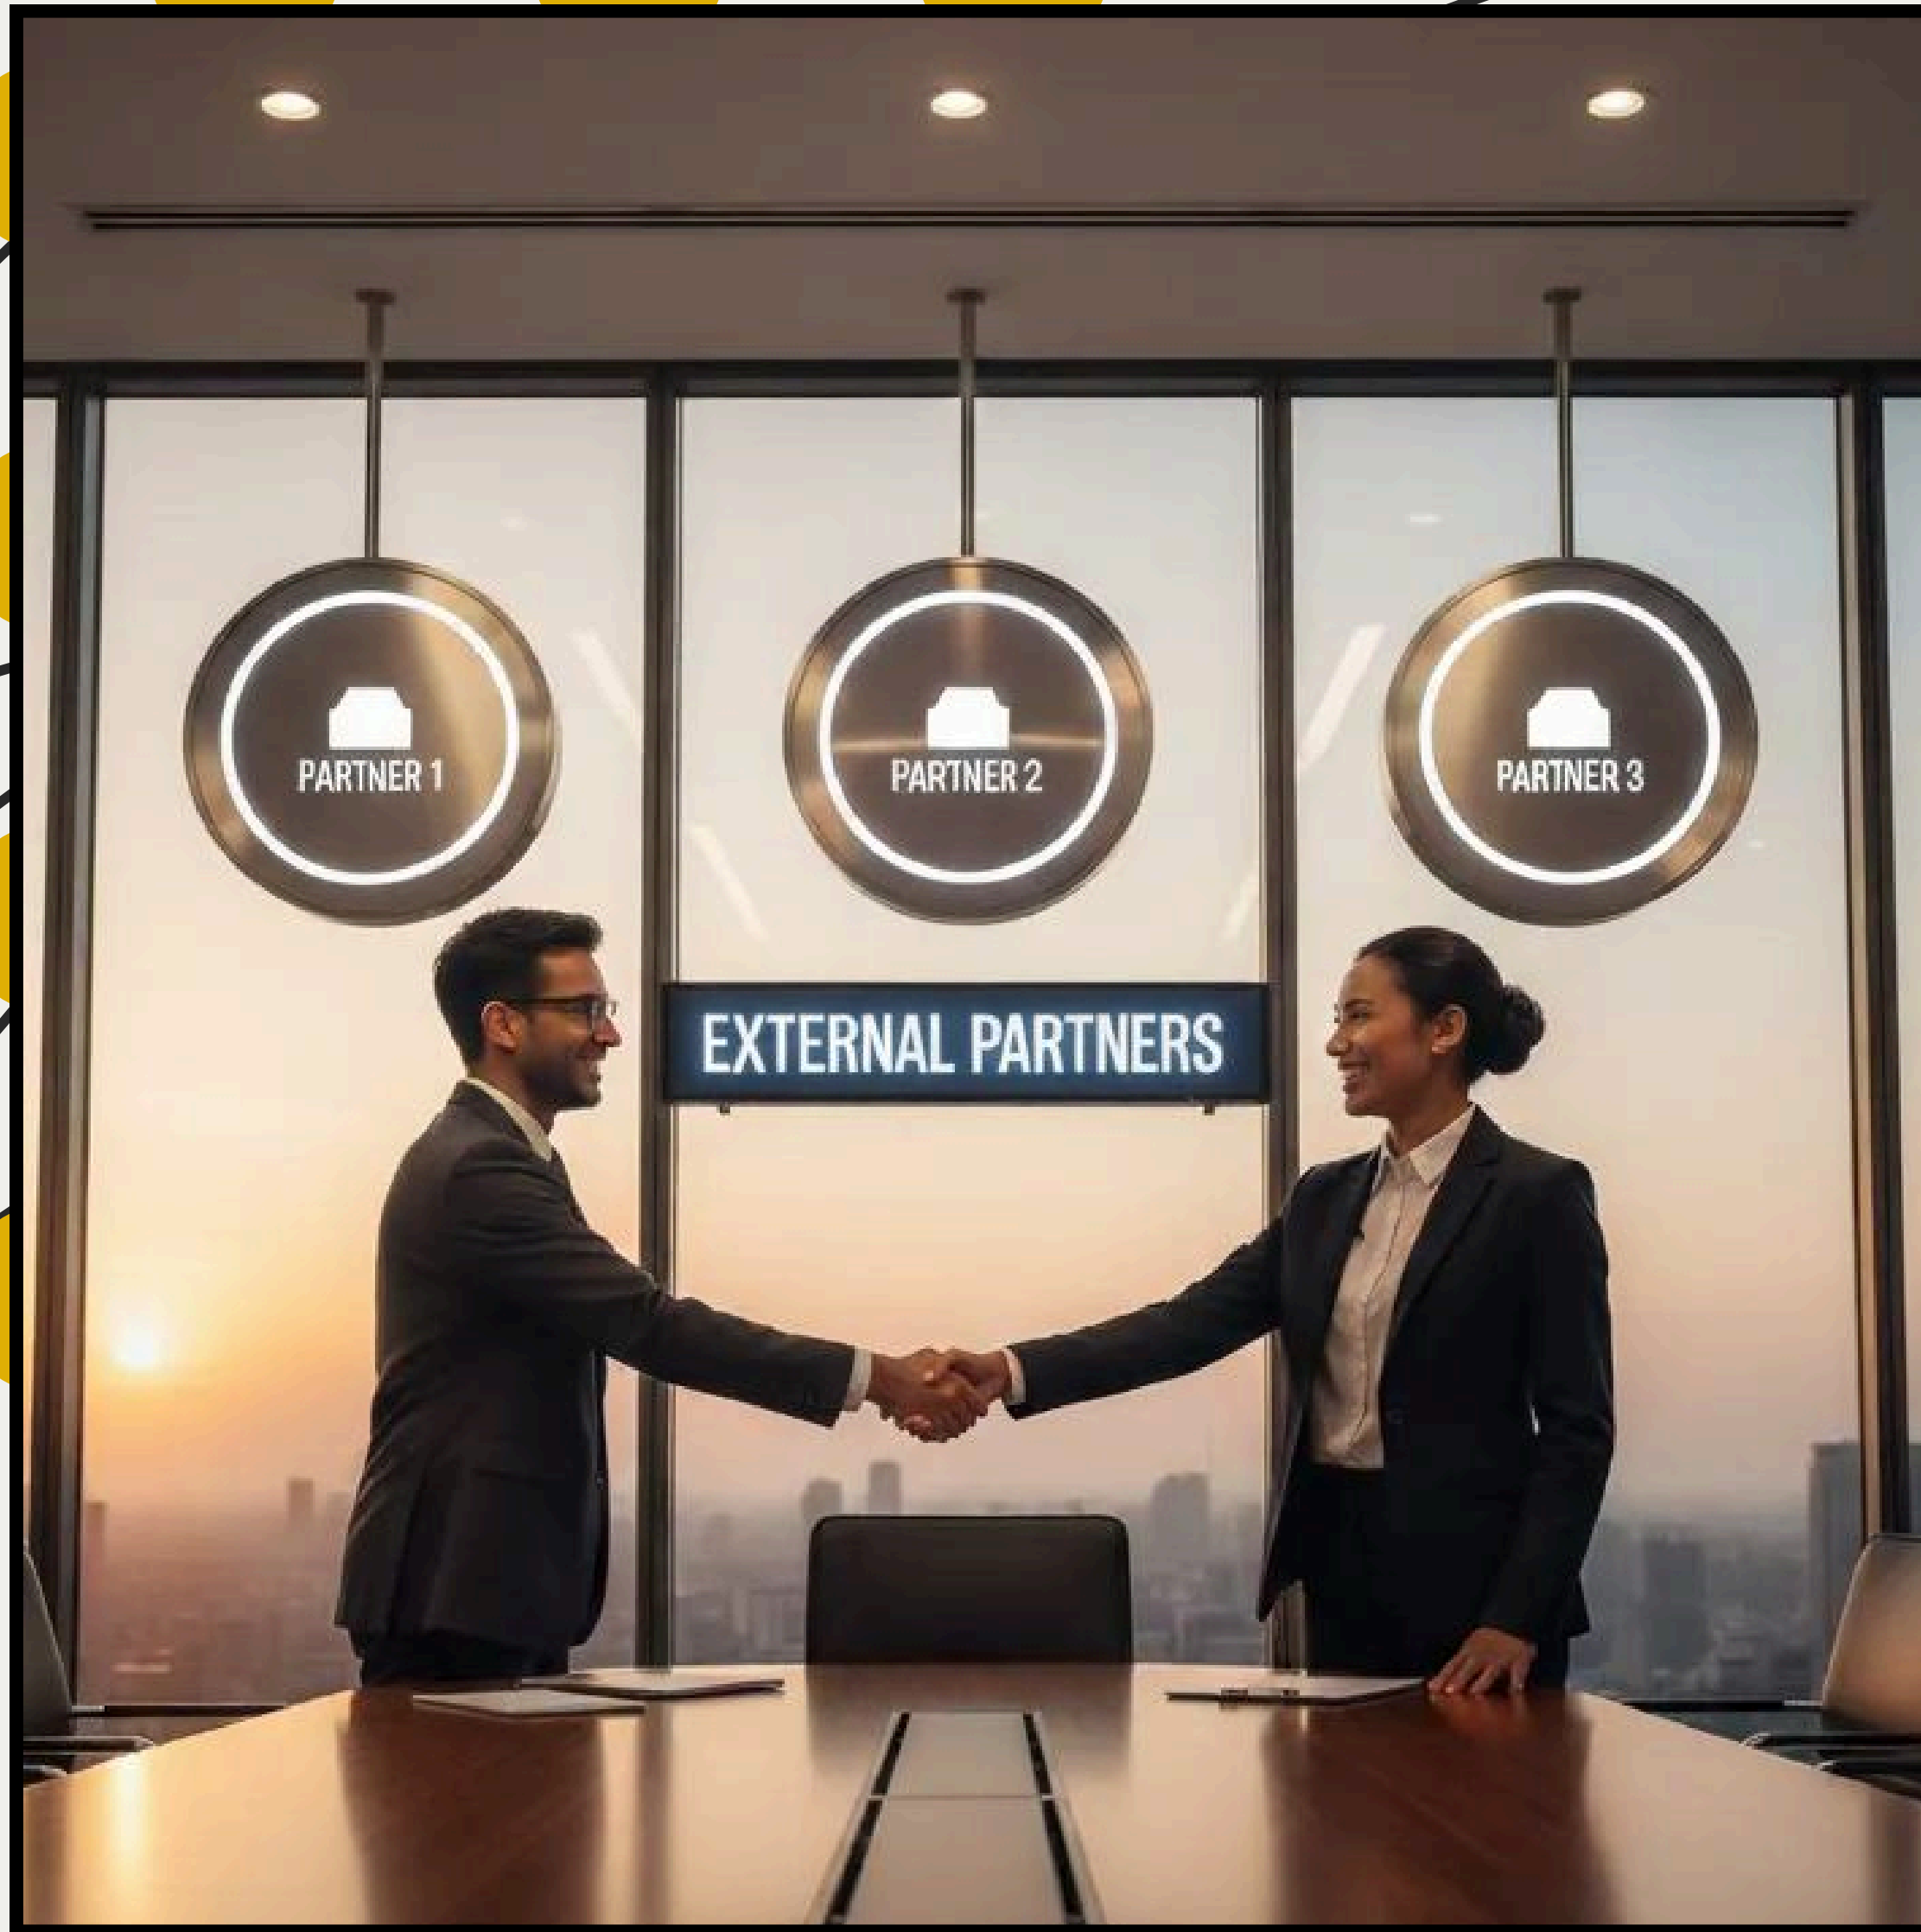

This is a much better system for campaign type organization than before and for that I am eternally grateful

My workflow is naturally slower because this feature added an additional step to campaign creation. That being said it's not a negative thing. From a user standpoint it is very simple and quick to apply.

Survey

“if there was a way to bulk edit flights with the same labels. Example: Chinet I have 10 different flights per retailer (10 target, 10 costco, 10 sams club, etc) and a way to bulk select where I want labels that would be the same across flights would be very helpful instead of going one by one. I do like how when you apply at the campaign level, that it applies to all the flights, this is an instance where i wouldn't want the same retailers on everything”

Abstract white line art on a dark background, featuring several flowing, organic shapes that resemble stylized leaves or brushstrokes, primarily located on the right side of the image.

Quarter 4

External Partners

Feature Add

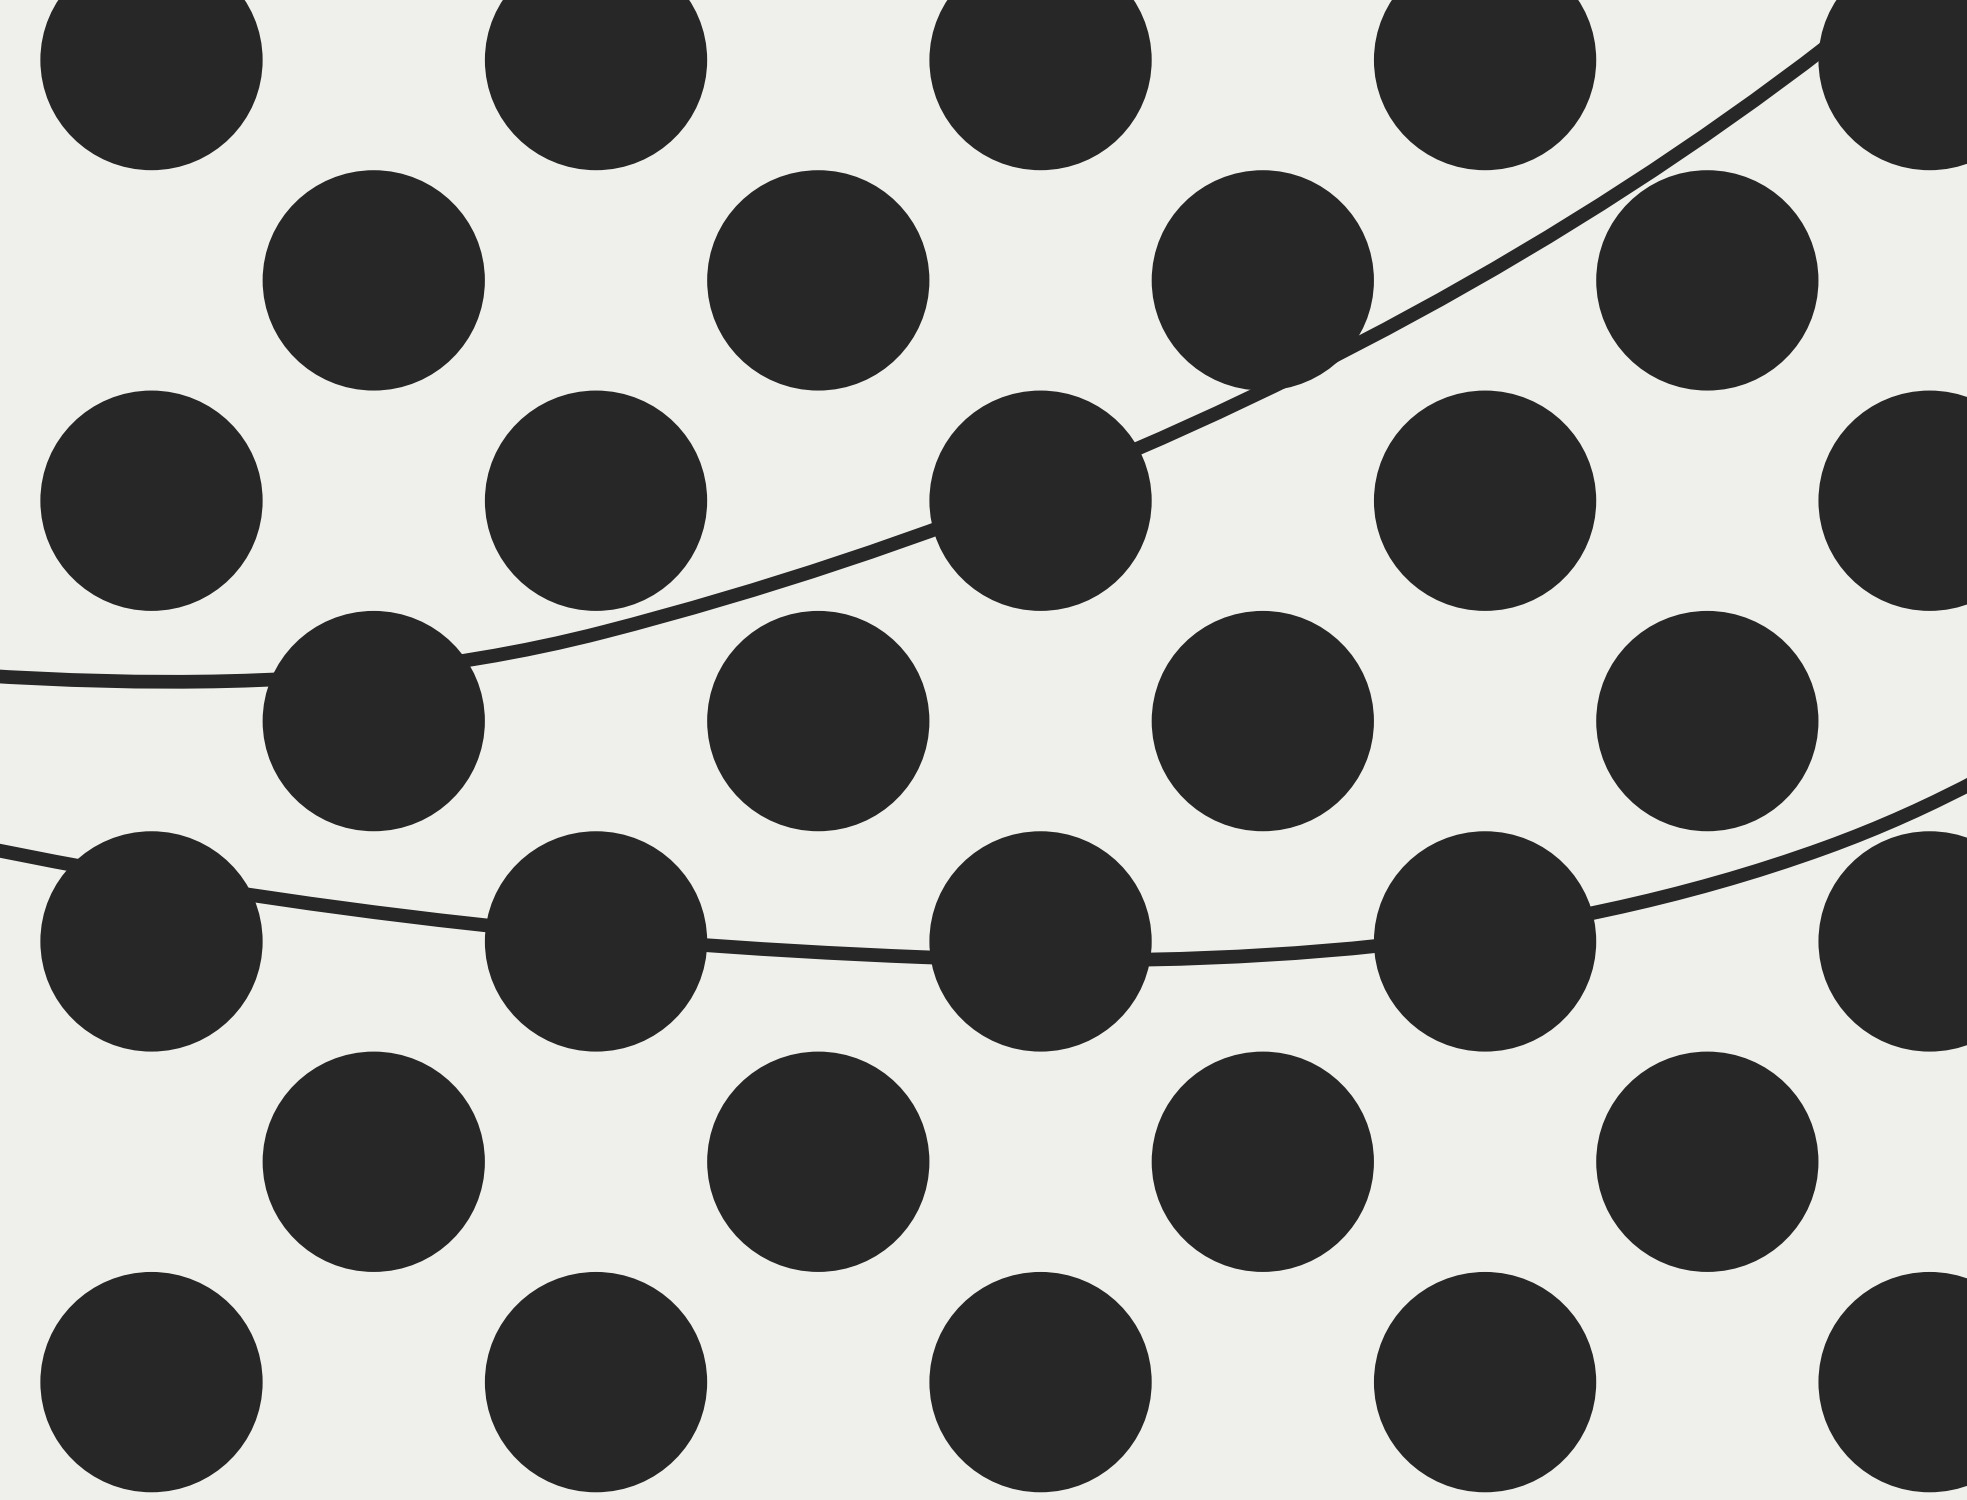

Details

Problem

Some flights map to objects in external partner systems, but those systems don't have an option for us to add in our flight IDs. Using Google Sheets to store those IDs is not ideal.

Solution

Allow Ad Ops to insert IDs from External Partners into MSP, creating a mapping between them.

Details

FLIGHT INFO

 Attention: Apply edits in Platform whenever possible. Edits made in Beeswax do not sync.

3 responses

"It's another step so it's slightly slower but a necessary step in order for everything to flow. "

Survey

this is a much easier and more organized system than a google sheet we have to be reminded to fill out every once in a while

Because this feature is needed after campaign launch typically, it doesn't really slow down my work speed. That being said, it works very well and is simple to use for what it is needed to do. Overall well done indeed.

Survey

“any way to automatically fill out when we get the push info?”

Survey

Amazing, beautiful, gorgeous creation

This did two things. It removed a need to run to engineering for help, but it also allows for the use of click tags as URLs in a multi button campaign. Both of these are a big improvement to campaign creation in certain situations.

Extremely convenient for ad ops now that we don't have to reach out to engineering to make generic links.

Survey

“this is perfect as far as i know at the moment (i think link duplication is a separate issue)”

Quarter 4 (into Q1 2026)

New Flight Types

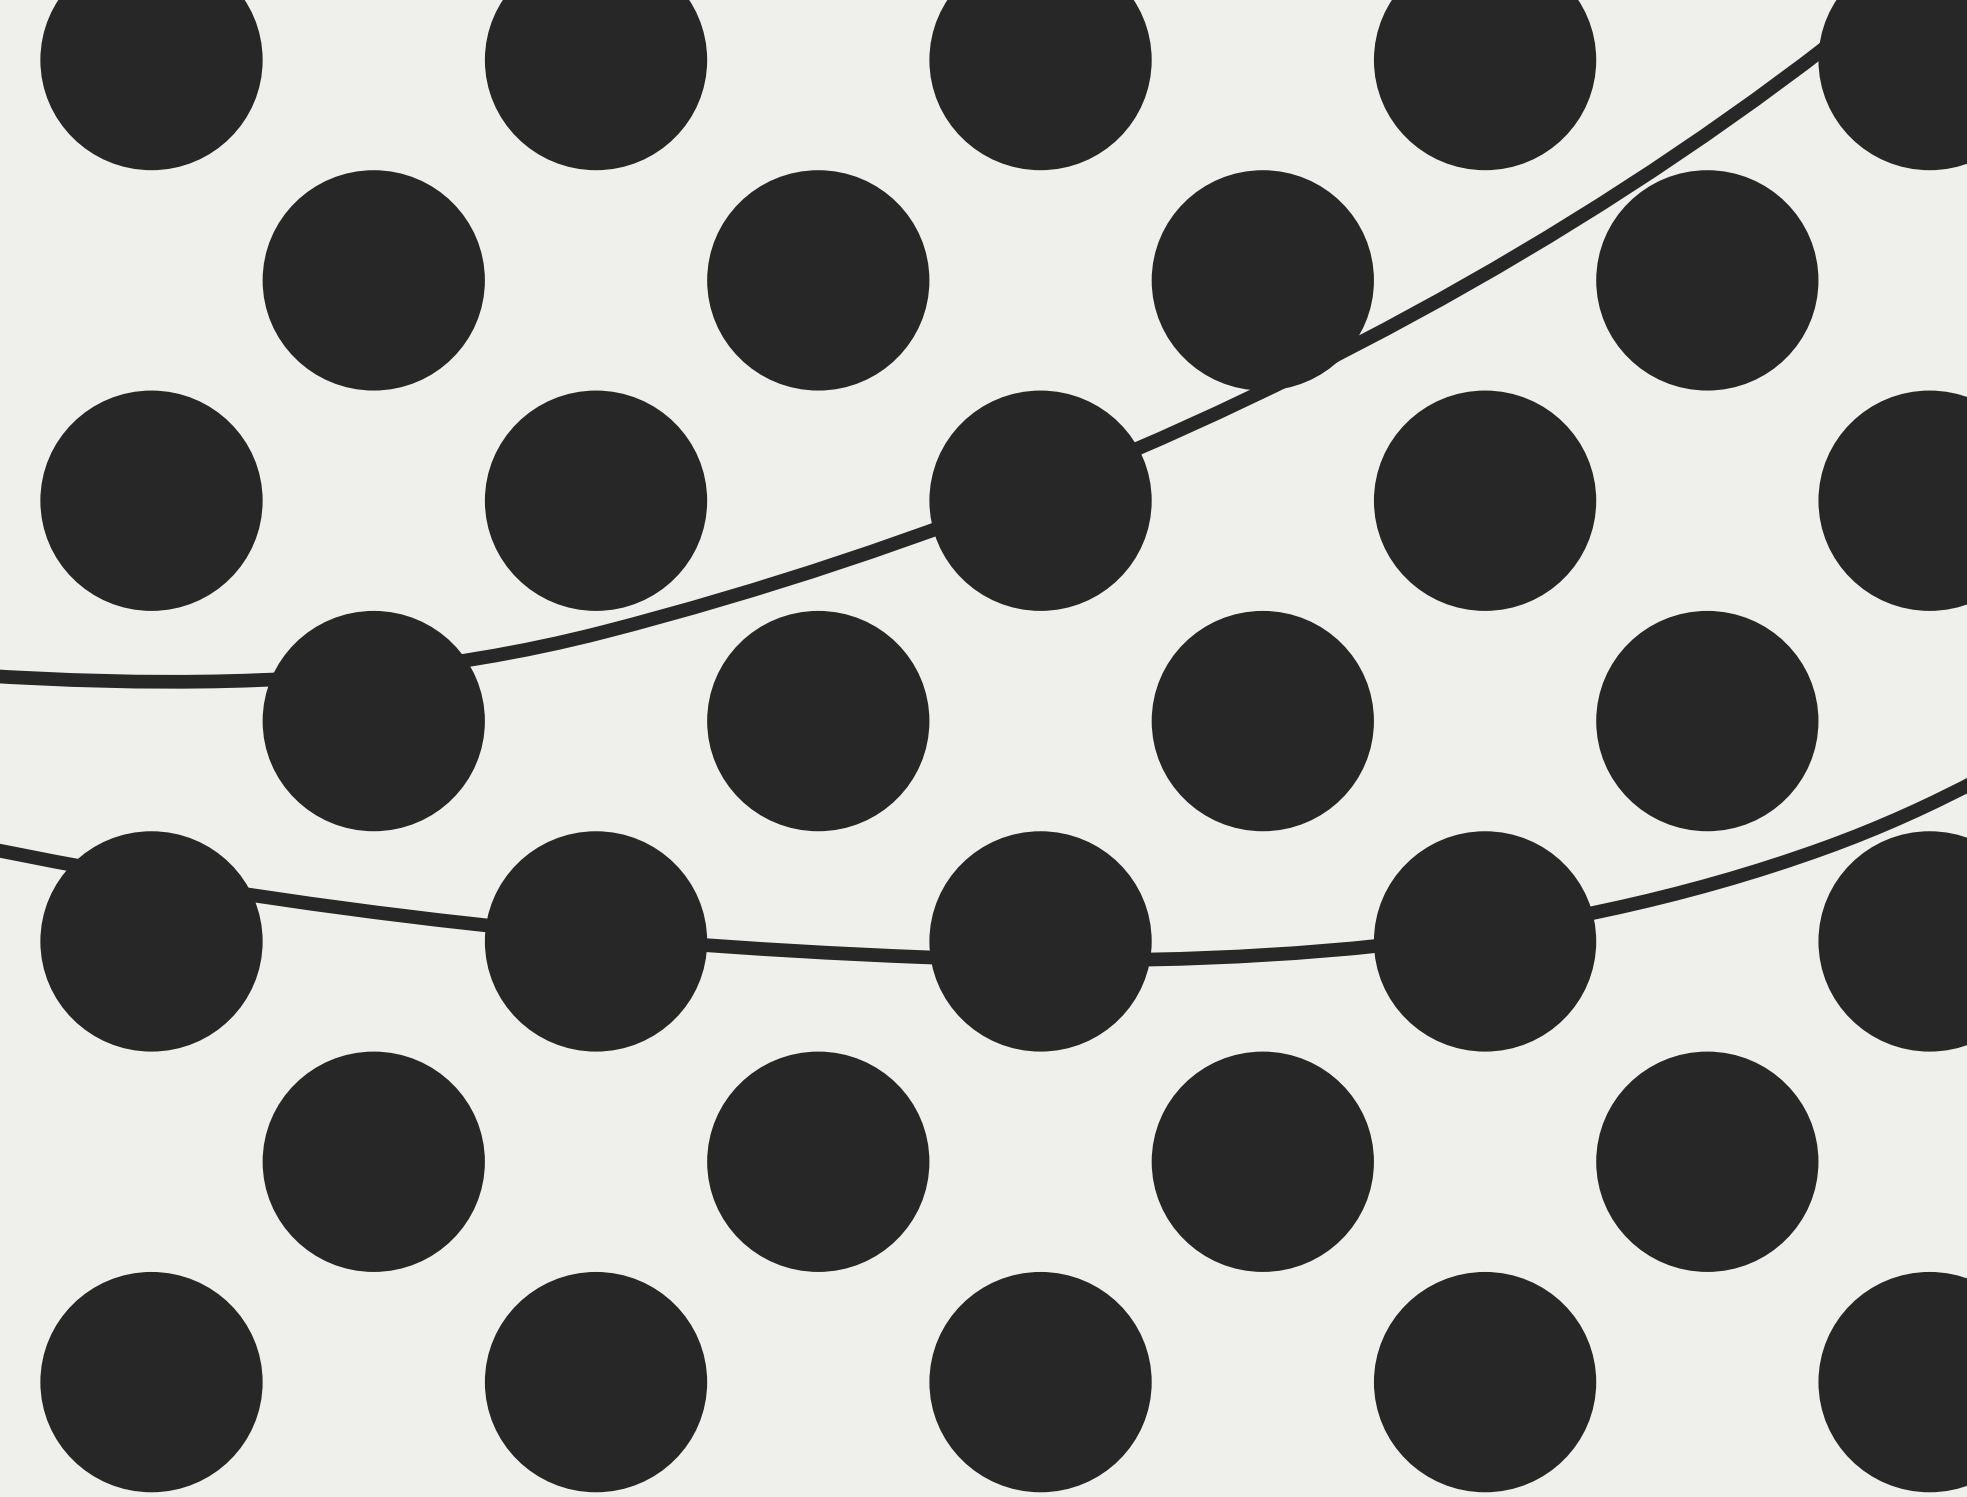

Feature Add

Problem

Ad Ops previously used a workaround for creating “placeholder” flights. Ad Ops is often aware of these flights after they have ran.

Solution

Create 3 new flight types – Push, Video, and RMN+, which will provide the necessary flight backdating features and restrict line item creation.
