
MSP Design System

AdAdapted UX/UI

Overview

Design System: AdAdapted's Managed Service Platform (MSP)

Agenda:

1. What is a design system?
2. Framework - Atomic Design
3. Benefits of using a design system
4. Demo
5. What's Next?

Design System

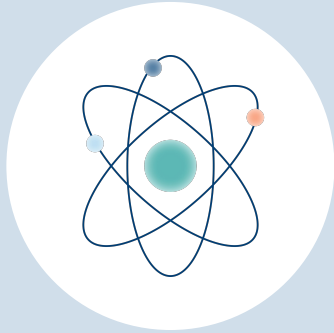

A Design System is the **single source of truth** which groups all the elements that will allow the teams to design, realize and develop a product.

– Audrey Hacq on  **Medium**

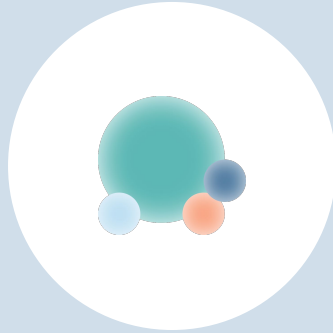

Atomic Design

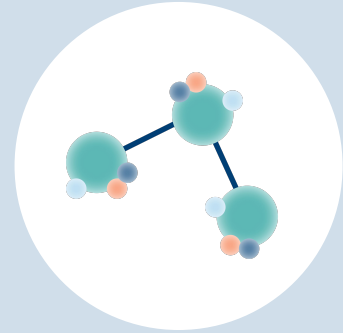

Atoms

Basic building blocks (color, font, other styles, icons, logos)

Molecules

Groups of “atoms” that create functionality (buttons, menus, form fields, etc.)

Organisms

When “molecules” come together to create larger assets such as tables

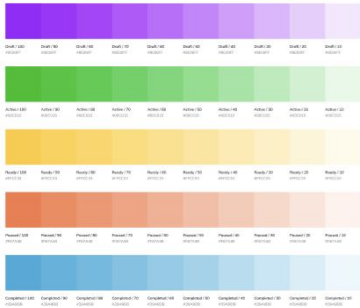

Colors

Validation

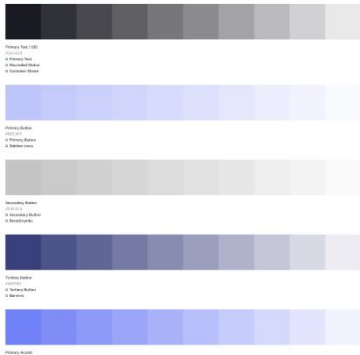

Statuses

These colors are used at 5% opacity to fill the status pills on various tables across the platform. Note Discarded status is also the primary text color within platform.

System

Strokes

Shadows

Drop Shadows

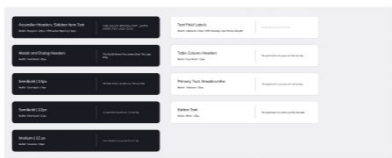

Divider Lines

Divider Lines

Fonts and Text

Fonts and Text

Text Placeholders

Text placeholders are components that can be used in table rows or column headers to be replaced with other components such as toggles, checkboxes, etc.

Global Asset Dropdown Icons

Global Asset Icons include Products, Tracking, Targeting, and Creatives. They can be found in the Campaign Assets dropdown button inside of a single campaign. The icon for Creatives also functions as the Image Preview icon.

Validation Icons

Validation icons are used to communicate to users whether or not their inputs or actions were completed successfully.

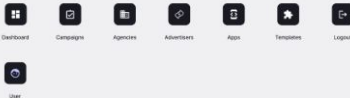

Table Row or Form Icons

Table Row/Form icons can be found inside of table rows or accordion forms and fields.

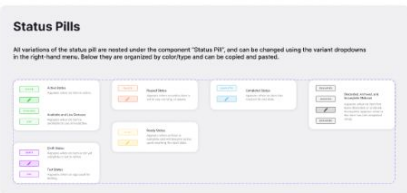

Sidebar Icons

The following icons are used on the site's sidebar menu. When selected, the icons become Lavender #BDC4FF. This instance can be found by switching the color property to "Lavender" in the right side panel.

Pills

Pills are 80px by 24px with a 1 px stroke at 100% opacity, and a 5% opacity fill. Text within pills is Mulish Semibold 8px, with 8% letter spacing.

Toggles

The toggle UI component allows users to switch between two available states or choices. Often, users are intending to turn on or off certain settings or features.

MIXED toggle state:

- A MIXED middle state appears automatically if that setting has different states across flights and/or line items.
- If a toggle is MIXED, selecting the toggle will open a popup to choose to bulk apply the setting ON or OFF.
- Selecting a toggle that is currently ON or OFF will turn the setting to its opposite without a middle setting (even if it may show a MIXED state later).

Toggle States

OFF state uses #BDC4FF colored toggle fill and white text.
ON state uses #F08080 colored toggle fill and white text.
MIXED state uses #F08080 colored toggle fill and white text.

*Toggles are not required to have a MIXED state.

MSP DESIGN SYSTEM

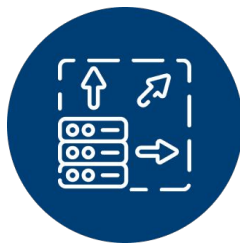

Overview

Benefits of Using Design Systems

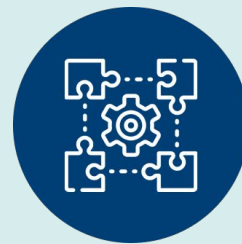

Creates a Set of
Standards

Manages Designs
at Scale

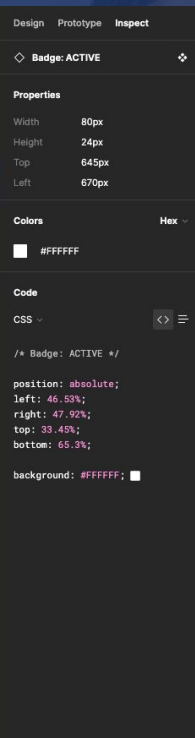

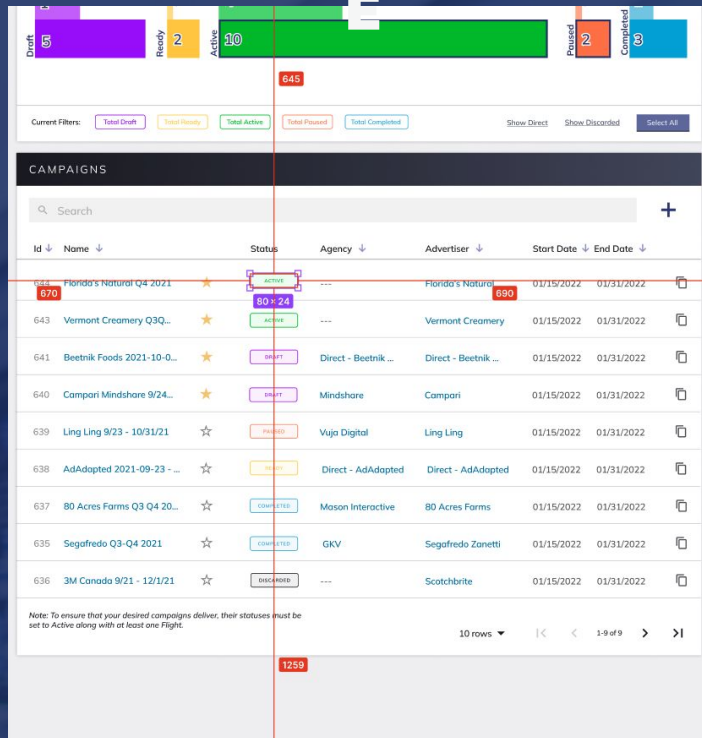

Creates a Universal
Language

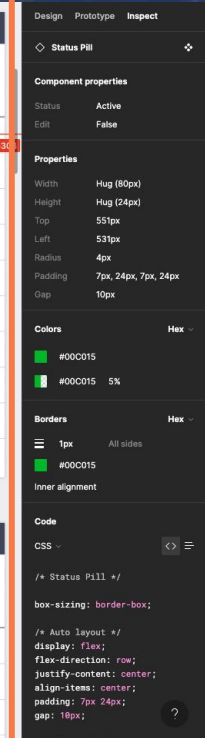

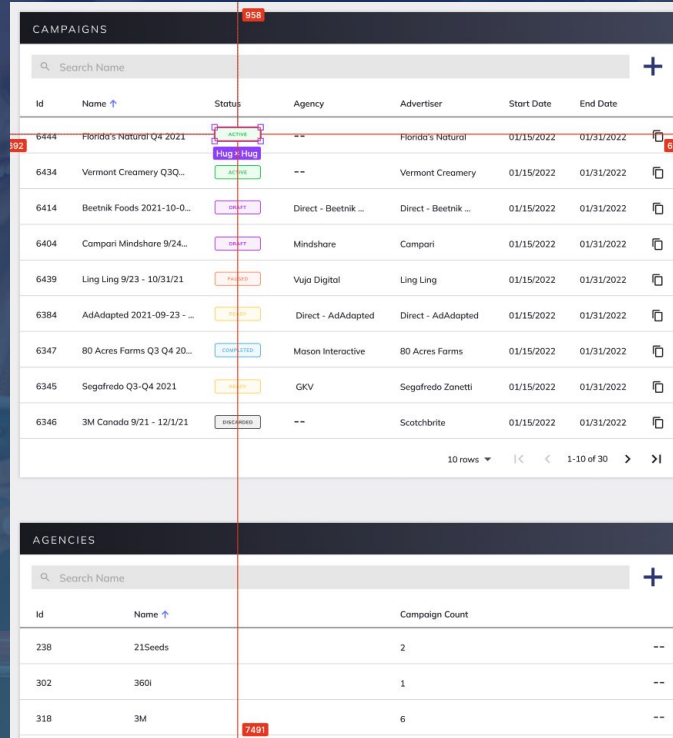

Encourages Visual
Consistency Across
Pages

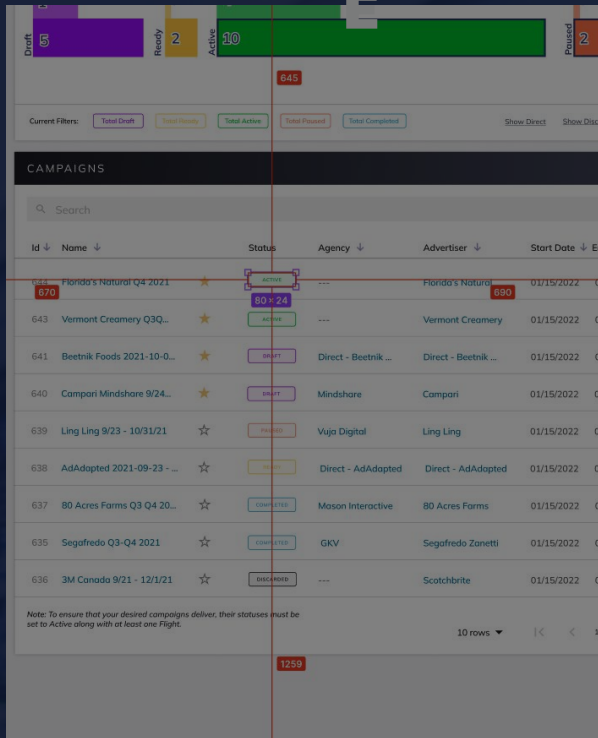

BEFOR

AFTER

BEFOR

Design Prototype **Inspect**

◆ Badge: ACTIVE

Properties

Width 80px
Height 24px
Top 645px
Left 670px

Colors

Hex #FFFFFF

Code

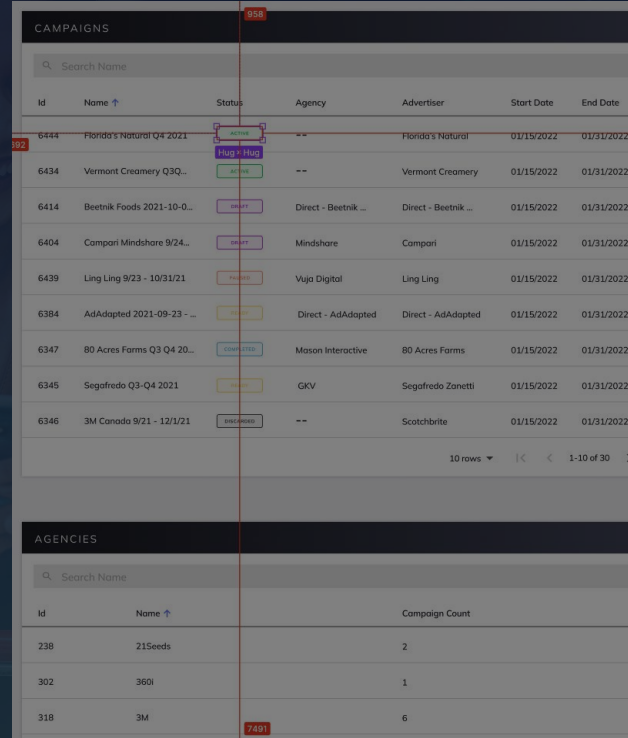

CSS

/* Badge: ACTIVE */

```
position: absolute;
left: 46.53%;
right: 47.92%;
top: 33.45%;
bottom: 65.3%;
```

background: #FFFFFF; □

Design Prototype **Inspect**

◆ Status Pill

Component properties

Status Active
Edit False

Properties

Width Hug (80px)
Height Hug (24px)
Top 551px
Left 531px
Radius 4px
Padding 7px, 24px, 7px, 24px
Gap 10px

Colors

Hex #00C015
#00C015 5%

Borders

Hex #00C015
1px All sides

Inner alignment

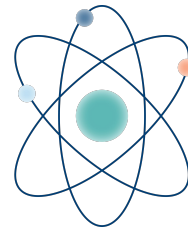

Code

CSS

```
/* Status Pill */
box-sizing: border-box;

/* Auto layout */
display: flex;
flex-direction: row;
justify-content: center;
align-items: center;
padding: 7px 24px;
gap: 10px;
```

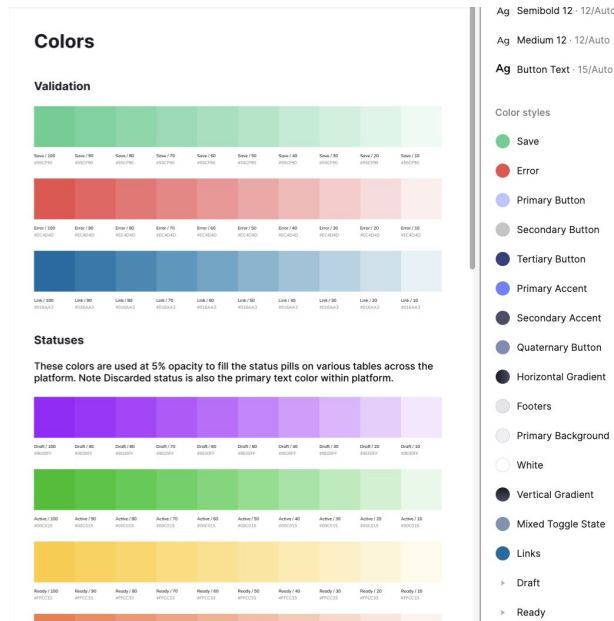

ATOMS: COLORS & STYLES

We always have working color palettes...

But why should we create color styles in Figma?

1. **Controlled** palette of acceptable colors
2. **Consistent** and proper usage
3. Allows for **easy management** and scale

MSP DESIGN SYSTEM

ATOMS: COLO

We always have working
palettes...

But why should we create c

1. Controlled palette of acc
2. Consistent and proper u
3. Allows for easy manage

Validation

Statuses

These colors are used at 5% opacity to fill the status pills on various tables across the platform. Note Discarded status is also the primary text color within platform.

Ag Semibold 12 · 12/Auto

Ag Medium 12 · 12/Auto

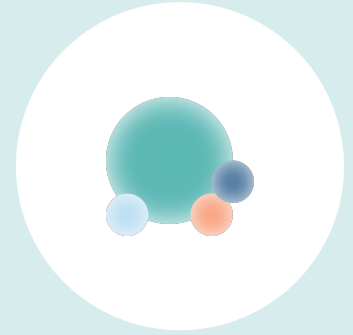

Ag Button Text · 15/Auto

Color styles

- Save
- Error
- Primary Button
- Secondary Button
- Tertiary Button
- Primary Accent
- Secondary Accent
- Quaternary Button
- Horizontal Gradient
- Footers
- Primary Background
- White
- Vertical Gradient
- Mixed Toggle State
- Links
- Draft
- Ready

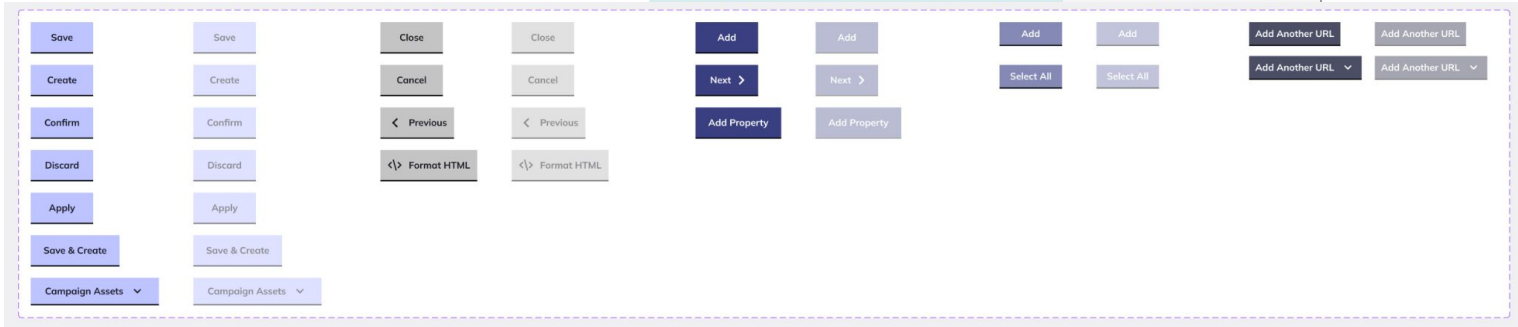

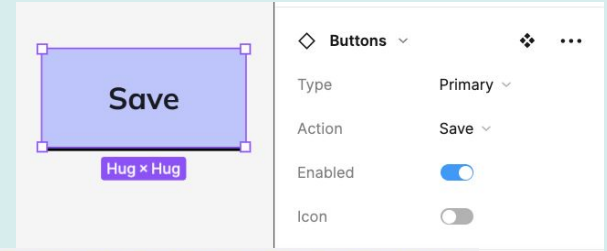

MOLECULES: BUTTONS

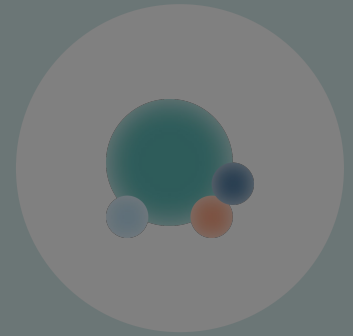

Now that we have our building blocks...

How do we create a full library of buttons?

- **Components** - reusable elements
- **Variants** - similar but different components that can have different combinations of properties
- **Component sets** - a collection of variants

How do we create a full library of buttons?

- **Components** - reusable elements
- **Variants** - similar but different components that can have different combinations of properties
- **Component sets** - a collection of variants

ORGANISMS: TABLES

What if we wanted to build something more complex?

We already have components to piece together!

- **Publish** components to the team library for easy reuse
- Access published components
- **Swap** components to fit requirements

MSP DESIGN SYSTEM

DEMO TIME!

Next Steps

Maintenance

Optimizing Performance and Reliability

- Continuing to update components as we work on new MSP features
 - Ensures accuracy and longevity

Measuring Success

Ability to Iterate Quickly

- Utilizing the foundation we've created in the Design System to quickly generate product variations
 - Additional color themes, dark mode

Other Products

Direct, Payload, Other

- Evaluating the benefits of adding components for AA's other products (long term)
 - Effort vs. Value
